SIRIUS Satellite Radio

Vehicle specifications needed:

1. Factory radio must come equipped with a “SAT” button on the display of the radio. There is no kit available at this time for vehicles with the “AUX” button. All factory touch-screen radio’s are satellite compatible, some may need to be updated.
2. When installing Sirius in vehicles that come from the factory with RSES DVD system, you will not be able to play units simultaneously.

Operation:

1. When unit is installed in the vehicle, you will receive only the preset stations from Sirius.
2. In order for the Sirius system to work, the customer will have to subscribe to Sirius by calling and setting up their account with the ESN serial number that is provided at time of installation on your manual.
3. This will allow the customer to listen to Sirius satellite through their factory radio once SAT button is pressed and scan channels by using the seek/tune button.
